

Portable Control Point

The Gasworks' Portable Control Point is an innovative, lightweight, go-anywhere solution designed for the safe operation of up to four Live Fire training devices.

Engineered for flexibility, it enables seamless control of multiple training scenarios, including both liquid and vapour gas fire simulations. The unit is available for both hire and purchase, providing a scalable solution for training anywhere.

Featuring a briefcase-inspired design with integrated quick-connect fittings that allow for rapid deployment and setup.

Operational

Designed for ease of use, this lightweight and portable system sets up and packs down in minutes.

Safety-First

Packed with advanced safety controls, including key lock, emergency shut-off device (ESD), and a range of additional safety measures, to ensure peace of mind and reliable performance in all weather conditions.

Operate Multiple Devices

Approved for liquid and vapour fires, the Portable Control Point can seamlessly operate all Gasworks Live Fire Training devices, making for consistent and repetitious scenario training.

Portable Control Point

Portable or Fixed Live Fire Device

Fully self-contained, the control point is designed for easy transport and rapid setup. No power is required, as it is pneumatically operated, making it the perfect solution for metropolitan and remote deployments. LP Gas is supplied via 45kg gas cylinders or auxiliary fill points from existing site connections.

Specifications

Length: 0.44 metres

Width: 0.55 metres

Height: 0.22 metres

Weight: 15 kilograms

Power Requirement: None

Gas Options: Liquid & Vapour

Gas Supply: main connection or 45kg cylinders

Pneumatic Supply: Nitrogen

Portable Control Point Operates the Following Devices:

Vehicles (sedan and utility)

Flange

210 kg

45 kg

Wild fire

Aircraft

Custom
